CADI Alternative-light Iriscope DM883U

Standard Components:

1. Main body: Commutator with on/off switch.
2. Handle. Switch for left & right eye light
3. Instructions & Warranty (Chinese and English edition)
4. Iris lens 30X
5. USB line
6. Portable well-designed aluminum box
7. Iris lens lid
8. CADI 2006 1.29v Iridology Software (English Version)

Iriscope System Functions:

1. Adjust brightness through either software or switch on handle line, delete the photos, and adjust the focus, quick fixed photos with white balance and high stability of colors. Connects directly with computer without outside power and easy to operate.
2. The software can save the client information and irises also the details of products that you recommend them. After taken the photos, you can analysis the irises and later compare the irises pictures when your client comes back to see their progress. You can print an analysis report and save the photos according to the date & time you take the photos.
3. This machine will help the client know his health condition, including the problem which you have had in the past. The Iridology will be your health counselor, tell you how to keep away from the illness.

Remark:

We have designed the new switch on the side of the handle, which is convenient for you to control the brightness of the light, and to control the left and right light. And it will help you to see clear picture in 640 x 480 (1.3 Mega-Pixels).
